

Design of Structure and Flow in the Earth Lab.

Suzuki Lab.

Associate Prof.
Anna Suzuki

Want to build societies taking advantage of natural resources!

Question

How should we evaluate complex natural structures and flow?

What kind of design is needed to sustainably use geothermal energy?

How can we create new value together in communities?

To answer the above questions, our research aims to estimate, predict, and design complex natural and social systems using mathematics and information science.

Hot Springs and Geothermal Seminars
Inviting Guests from abroad

Cozy space.
